## Preface

The rise of Bitcoin and other cryptocurrencies is revolutionizing financial transactions, creating new ways to pay and remit online without going through pre-existing credit- and point-based payment systems. Depending on how they further develop, cryptocurrencies have the potential to create a truly open and borderless world of finance.

The purpose of this whitepaper is to describe the offering of the **SEED OF LOVE TOKEN (SEOL)**, the primary purpose of which is to provide a means to show gratitude, appreciation and donation for a kind gesture or support to an organization. SEOL is designed to act as the medium for purchasing gift online and for trading. We will also use a portion of the fees from the SEOL offering to promote these existing services and grow our network.

## Executive Summary

“SEOL currency as a noble idea which binds a multifunctional ecosystem with a blockchain based utility token so that the end users makes easy transactions, stores coins in a secure environment for their different needs in a hassle-free manner and give to the less privilege using the cryptocurrency ecosystem that we would offer.”

The core of the entire Seed of Love ecosystem is powered by the multifunctional platform which amalgamates three different streams into a single powerful utility. The multifunctional platform suggests donation receivers' multiple streams with an earning potential where they can earn in one or more ways. Doesn't matter what is the nature of your profession or kind of experience you have in Crypto related activities in the past. The Platform gives leverage of generating income to every single user regardless of his category.

Hi, with warm welcome we usher the seed of love token into the crypto world. Our idea for this token has evolved not only from the development phase but to the ICO launching phase.

# THE SEED OF LOVE PLATFORM

## Platform

Seed of Love is a platform based on the Ethereum blockchain and powered by the SEOL tokens.

The platform provides an ecosystem of services through an easy-to-use interface, connecting the non-profit community while allowing full transparency and traceability of donations & appreciation. Donors, charities, causes, projects and many more will benefit from the services provided by the Seed of Love platform.

To simplify the donation & appreciation process and increase SEOL adoption, Seed of Love will integrate several services in one single platform including an internal exchange to convert major cryptocurrencies into SEOL, a built-in wallet to store and donate easily, an explorer to track donations transparently, an easy payment or deposit using Skrill wallet, Perfect Money, Payeer, Paypal webmoney & Neteller, and templates of smart contracts to run fundraising campaigns.

## Our Platform Strategy

**Convert and Store or Donate to your Charity:** Seed of Love will allow donors to convert major cryptocurrencies into SEOL at the current exchange rate, while the built-in wallet will allow every registered user to easily manage and store SEOL tokens without using external services.

Donors will be able to convert major cryptocurrencies such as Bitcoin, Ether, Lite-coin, Dash and ERC20 tokens into SEOL with the aim to add an increasing number of cryptocurrencies and also fiat currencies in the future.

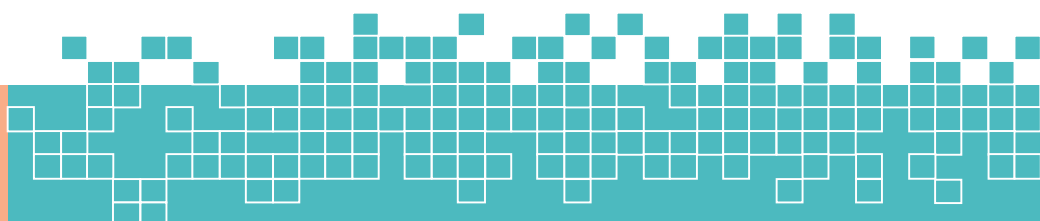

**Easy Deploy of Smart Contract:** Smart contracts being computer protocols designed to facilitate, verify, or enforce the negotiation or performance of a specific set of rules are ideal to facilitate charities fundraising & showing appreciation. The Ethereum blockchain specifically allows the registration and execution of smart contracts in a secure and decentralized way.

Implementing smart contracts in the non-profit or ecommerce sector adds a layer of security and effectiveness to the process, allowing the transfer of funds only to expected recipients and if specific conditions are met.

Seed of Love will provide charities with templates of smart contracts that can be easily customizable with the click of a button depending on each campaign's requirements.

For example, a fundraising campaign may be deemed successful only if at least 50% of the funds needed are raised. If this condition is not met, the smart contract will return the donations to the donors. Similarly, a smart contract can keep the donation in an escrow account until independent validators confirm that the charity has delivered the promised project.

We believe that smart contracts will play a central role in revolutionizing the non-profit sector. Donors will be more incentivized to donate to the non-profit and fundraising organizations that are part of the SEOL ecosystem, since in addition to public transparency they will also have the certainty that funds are used only upon fulfilment of set conditions and contingencies.

## OUR MISSION

Seed of Love Token is not just an ordinary token but a new found way to share the Love the Crypto style. Seed of Love token is a token for showing Gratitude, Appreciation, Donation, purchase of gifts online and also will provide futuristic investment plans and advice for not only Crypto Traders but also forex Traders. This token will impact the crypto world positively in a manner that both investors & less privilege will benefit.

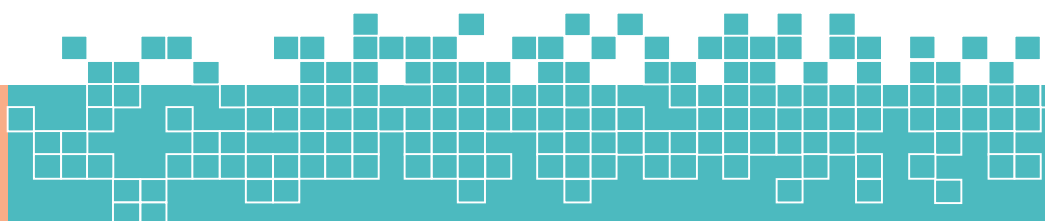

We hope to integrate our own Exchange in the future with SEOL token as the major exchange pair for every token that will be available on our platform... After the ICO our token will be listed on some major Exchange, we also are going to integrate the exchange between E-wallet's and our crypto token.

## Our Vision

Our vision is not only to Provide Consultancy for Trading both the Forex Market And Crypto Market we also will provide a well-integrated platform for storing Crypto currencies and also a fast integration for Exchange we hope we can make exchange available for E-wallet's pairs to crypto.

Seed of love token is a project integrated to solve the conversion of Crypto Currency to Fiat by using electronic money as its conversion Agent by providing an E-wallet with p2p trading system for trading Crypto and Electronic Money Pairs, like skrill, perfect money, Payeer, PayPal.

This integration will help charity organization and fundraiser who use Crypto as a means of receiving donation, this will help Conversion of Funds to be faster, Cut down Taxes and paper works as Electronic Money Offers payment within few hours this will save time and lots of Cost... Due to Our Expertise we also provide Investment Consultancy and Plans...

# Project Model

## 1) Showing Gratitude and Appreciation

*SHOWING LOVE AND APPRECIATION THE CRYPTO STYLE.... HOW DO YOU SAY I LOVE YOU OR THANK YOU IN CRYPTO LANGUAGE*

**Seed of love** first solution is the most common issue most people face in their daily life. Imagine giving 10\$ or 30\$ as a token or tip to someone you love or for a job well done knowing that the individual will squander it or will always look up to you for more or with a little more expectancy on a regular basis... How about you pause and think about it, I think it's high time you sow a Seed into such Individual's Life.

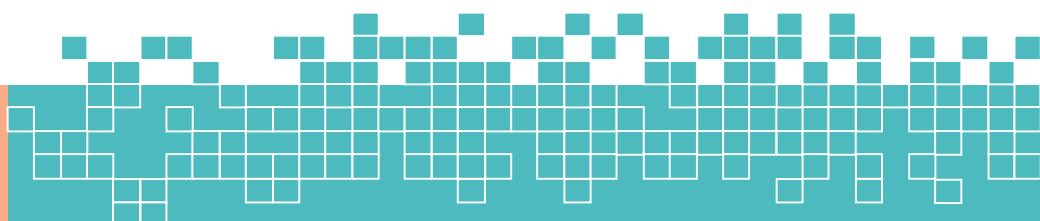

This term might be common to some people and strange to others but the bottom line is; how about you say I Love you or thank you using the crypto language a way that can make such individual benefit more than he would have with the cash in hand as that token could serve as an investment or saved up for a better purpose due to the constant rising and appreciation of our token and our partnership plan such individuals who store up their coins will constantly receive random bonus...

Some might Roll their eyes at this and say it will be easier to pass a dollar, make a promise or make payment in another way or purchase a gift item but with SEOL as the means of gratitude the person will benefit it more!

**Discover and Connect with the Ecosystem:** Traceability and transparency are just one part of the team's vision. Creating a vibrant and engaged community is equally important for the future success of the non-profit sector.

Seed of Love will help donors to connect with all the actors involved in the non-profit sector, providing them with tools to facilitate new types of collaborations.

Donors will be able to search, discover and review charities, causes and projects on a single platform, while charities will be able to publish regular updates, create and send direct marketing campaigns, request feedbacks and share volunteering opportunities.

## 2) E-Wallet

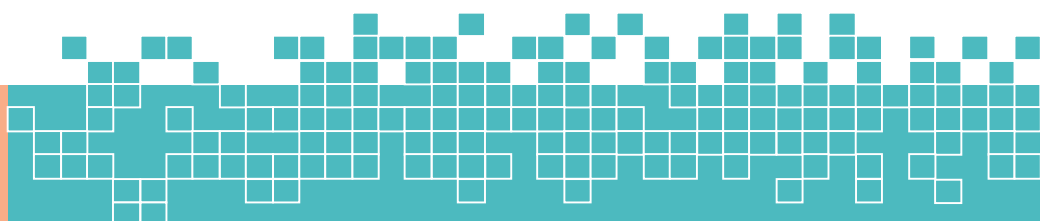

**What is an E-Wallet:** Blockchain backed cryptocurrency provide a variety of solutions for storing digital assets. There are a range of offline and online wallets available for users having different attractive features and specialties. Among all of these, the online or e-wallet storage options are more promising due to its simple and convenient user interface and features. It perfectly integrates safety with a fast and promising storage solution. The dedicated wallet services are a potential answer to fight back and minimize the phishing and hacking attacks which are common on the exchange wallets. They are packed with security layering(s) of advanced cryptographic algorithms.

**The E-Wallet Platform Model:** Seed of Love plans to provide users of SEOL token an E-wallet parked with sophisticated modern technology to encrypt customer vital information and perform transactions securely without third party interference. Our E-Wallet will integrate very well with other wallets, allowing our wallet users to transfer and receive cryptocurrency directly to their wallets.

Upwards of 25% of online shoppers abandon their order due to frustration in filling in forms. SEOL E-wallet combats this problem by giving users the option to transfer their information securely and accurately. This simplified approach to completing transactions results in better usability and ultimately more utility for the customer.

The E-Wallets can also increase the security of the transaction since the wallet typically does not pass payment card details to the website (a unique transaction identifier or token is shared instead). Increasingly this approach is a feature of online payment gateways, especially if the payment gateway offers a "hosted payment page" integrating SEOL token E-wallet will serve as an online guarantor and middle man certifying and vouching for those utilizing it as a payment option for due to the verification process integrated into our wallet platform, one can easily purchase anything online without necessarily having to fill out forms or standard KYC or AML process on any website they visit.

**The SEED OF LOVE E-Wallet:** To provide cross-platform functionality and smooth transactions among the users, **Seed of Love** offers secured wallet services for users. The idea behind the development of this e-wallet lies beneath a Vision which advocates that users should be able to make an instant transaction which is equally fast as well as secure. **Seed of love** e-wallet covers this visionary approach fruitfully. It's a multi-platform storage option that will be used across many platforms of the **Seed of Love** ecosystem.

## Features

- ✓ **Multi-Platform support:** In order to make it more accessible and user-friendly the wallet services will be provided both on the web as well as mobile platforms. Apart from our e-wallet assist smartphone users. In order to match the demands of the mobile users on two major application platforms (that is Android and iOS), the storage facility will be provided to smartphones as well as tablet owners.
- ✓ **Security:** Our Wallet service is duly shielded with multiple layers of security features like 2FA, Finger Print, a Wallet Sign and IP whitelisting.
- ✓ **Autonomy:** Our online wallet provide full autonomy to people as each user with valid address will be provided private key access so that in case of any downtime with the server the custodian of funds has full access to their digital asset.
- ✓ **Tipping Other SEOL wallet Users...Free charges but a limit transaction of \$50 a day**
- ✓ **Exchange between SEOL and other Crypto**
- ✓ **Exchange between SEOL and E-Money**
- ✓ **Sending and Receive Crypto**
- ✓ **Storing Erc20 Token**
- ✓ **Shopping interswitch for online payment**

## 2) Easy Payment

**Introduction:** Making it as easy as possible for our users to pay is essential for increasing conversions and sales. This is why checkout page is critical. It's the final stop for people shopping on a website. It's the place where they hand over their credit card information and finally part with their hard-earned cash.

It sounds obvious, but there are platforms that offer only one payment method. However, data highlighted in an info-graphic from **Milo** shows that 56% of respondents expect a variety of payment options on the checkout page.

While it's not necessary – nor practical for that matter – to offer every conceivable payment method available, you'll want to take a look at your target audience to see which payment methods they use. Then, you'll be able to capture the majority of people visiting your website.

For instance, a good combination would be to allow direct bank transfers and payments from all major credit cards. In the end, it all depends on who you're catering to.

**Our Strategy:** The team will develop SEOL EasyPay, a payment gateway that allows ecommerce websites and charities registered on the Seed of Love platform to accept donations & payment in different cryptocurrencies directly

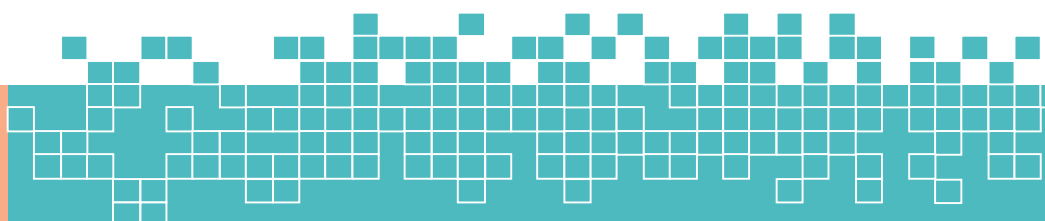

on their website and mobile application which are then instantly converted into SEOL. This is to allow websites & charities to simply manage all donations & payment received within a single wallet and providing transparency and traceability through Seed of Love ecosystem. Since SEOL will ensure that a public address and other data (depending on the jurisdiction) corresponds to a registered charity or ecommerce website, the platform will be able to provide a compliant tax deductible receipt both for donations made directly through SEOL EasyPay and goods payment made through SEOL EasyPay.

**The Need for a Secured Payment in Ecommerce:** E-commerce portals are the biggest target of hackers and phishers because of the vulnerable payment system they sport. There are frequent instances where hackers dupe e-commerce providing companies because of the payment gateway loopholes. Additionally, some purchases take several hours or sometimes days to execute especially when the transactions are made between different countries and regions. So, security and speed are the two most worrisome areas where the focus should be drawn upon.

**The Solution We Bring:** The SEOL EasyPay platform will solve these two problems simultaneously. Your personal information and money will be protected with every transaction. The money paid will be held in escrow until the goods are delivered to the customer to prevent any fraud.

**Seed of Love Easy Payment:** We plan on making it possible for holders of SEOL to make direct payment or exchange into their Skrill wallet Perfect Money, Payeer, Paypal webmoney and Neteller by offering a p2p platform and later advancing to a firmer exchange to enable users use our token to pay for top cryptocurrencies or purchases online. There are over 100 ways to make payment into this top payment gateways but **Seed of Love** will strive to be one of the top ways.

With our future technology, it's never been easier to buy cryptocurrency or items using your SEOL token.

## Token Details

Token Name	Seed of Love Token
Token Symbol	SEOL
Total Supply	1,855,000,000
Decimal	18
Soft Cap	\$2,200,000
Hard Cap	\$4,000,000
Token Price	\$0.005
Market Cap	\$6.2 Million
ICO Starts	13 July 2019
ICO Ends	10 December 2019

OUR AIRDROP IS DATED TO START BEFORE THE ENDING OF THE MONTH OF JULY

## Token Allocation

62.5% ICO SALE

20% OF TOTAL SUPPLY FOR THE TEAM

10% Marketing

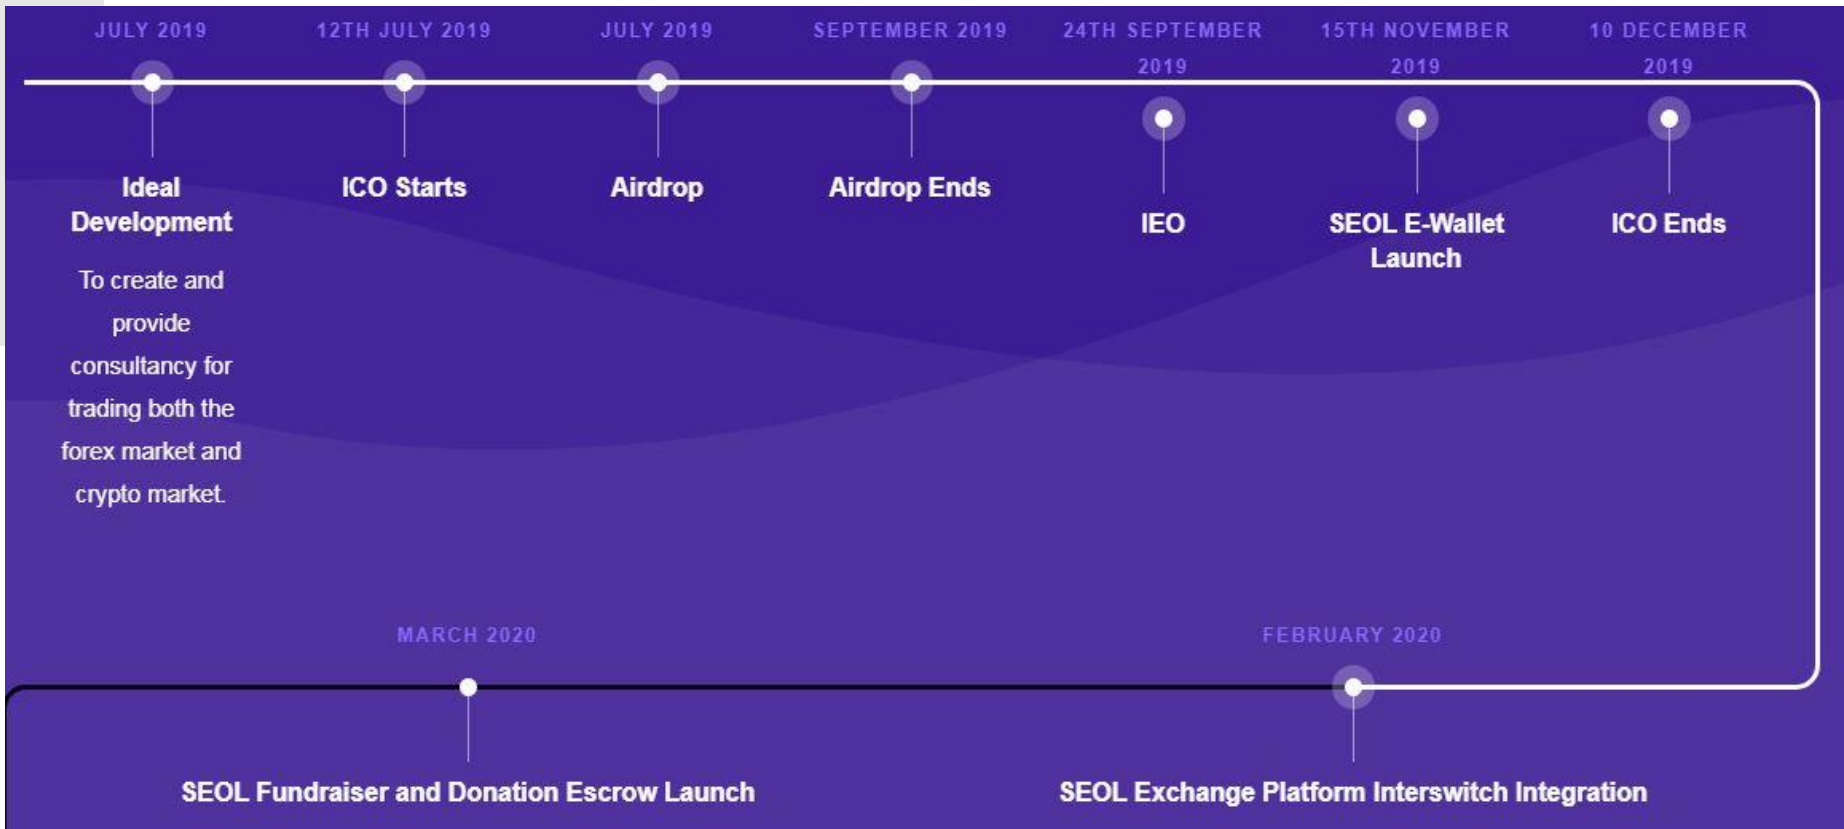

7% TO MAINTAIN MARKET LIQUIDITY

0.5% for airdrop

Rest unsold token will be burned

# Roadmap

## Team

Mosco Ovie  
CEO

Amrit Mirchandani
